

Training

**SQA [SELECT] Customised Award in
Requirements for Electrical Installations to BS
7671:2018 (18th Edition) - Virtual Classroom**

Overview:

This SQA approved Training Programme has been designed for qualified electricians looking to update their BS 7671 training. This course is suitable for electricians who are responsible for ensuring that electrical installations are installed and commissioned in accordance with current requirements. **This course is also suitable for Applicants applying for ECS gold cards only.**

Note: The course does not cover the detailed requirements for inspection and testing of new or existing installations.

Aim:

The aim of this programme is to provide detailed information on the particular requirements of BS 7671:2018.

To complete this course successfully the participant must be able to demonstrate knowledge of this standard by successful completion of the course assessments.

Content:

This programme is made up of two parts. There is a short online course on 'Introduction to BS 7671' that must be completed and delegates also need to attend a one-day virtual classroom session on Requirements for Electrical Installations to BS 7671:2018.

Introduction to BS 7671 (Online Course)

The online course provides a basic introduction to BS 7671. The aim of the course is to ensure that delegates can successfully navigate and find key information from the IET Wiring Regulations (BS 7671). It is estimated that this introductory course will only take a few hours to complete and can be completed in stages.

To complete the online course, candidates will need access to Requirements for Electrical Installations (18th Edition Wiring Regulations) BS 7671:2018.

The online component complements the material that will be covered in the virtual classroom session. To get the most from the virtual session we recommend that delegates complete the online course element before attending the virtual classroom session. However, delegates can complete the online element up to one-month after the virtual session date.

Requirements for Electrical Installations to BS 7671:2018

This one-day virtual classroom session covers:

- Fundamental Requirements
- Definitions
- Assessment of General Characteristics
- Protection for Safety
- Selection & Erection of Equipment
- Verification
- Special Installation or Locations

There are assessments at various points in the day. These consist of workbook exercises and multiple-choice questions.

Candidates must successfully complete BOTH the online course and the virtual classroom session before we can apply for the certificate from the SQA.

Disclaimer:

It is the responsibility of the attending delegate to insure their broadband supply is adequate to support the virtual format of the course which involves a web-camera and audio and that their laptop/pc has the up to date version of internet browser.
